

Ralph Smith of Leucadia Orchids, passed away. Please remember him and his family in your thoughts.

JANUARY 2005 NOVICE MEETING

January 4th, 2005, 6:30 PM - CASA DEL PRADO - ROOM 104

By **Bill Molnar**, 2nd Vice President

Bob Hodges, a past president of the SDCOS, will be speaking to us about how to grow Paphiopedilums. Once you hear Bob speak about Paphs, you will want to increase your collection. He makes Paph growing easy. (He still has original plants bought in 1970). His enthusiasm will inspire you to make Paphiopedilums an important orchid to grow. His whole greenhouse is full of them. You'll gain a new appreciation for Paphiopedilums. Don't miss it!

A belated Thank You to Peter Tobias for his talk on orchid conservation projects around the world in November. His information and devotion to saving our orchids is much appreciated. As for the December Novice meeting, it was deleted in favor of the holiday party. Gary and Judy Pierwola put together a fabulous holiday celebration. Gary, anytime you and Judy want to delete the Novice Class for good food and a great party, you've got our vote. Thanks for your effort and dedication.

JANUARY 2005 GENERAL MEETING

January 4th, 2005, 7:30 PM - CASA DEL PRADO - ROOM 101

Marni Turkel is a native of the San Francisco Bay Area and has been growing orchids since 1980. A hobbyist grower, she grows her orchids in two greenhouses at her home in Santa Rosa, California. She is especially interested in cool-growing miniature species but plenty of larger plants have crept into the collection as well. Though the collection has never been counted, most guesses put it at several thousand plants representing a wide range of genera. Marni is a frequent contributor to Orchids magazine with her series called 'Well Worth the Space' and has co-authored several articles with Eric Christenson in recent years. Her articles have been translated into Dutch and German for international publication. Photographs of her plants have been featured in articles for the past several years in both Orchids Magazine, Orchid Digest, Richardiana, The Orchid Review, and The Australian Orchid Review. A working potter for over 35 years, she owns and manages Stony Point Ceramic Design which is a small pottery that produces vase, orchid planters, flower arranging containers and dinnerware.

Marni will be speaking about Coelogyne, Dendrochilum and Related Genera. This talk covers the seven genera that comprise the subtribe Coelogyinae. If you don't already know which seven that is, come to the talk and find out! You will learn about the diversity within the different genera, see both common and rarely seen species as well as learn about habitat and how it relates to cultural needs.

NET NUGGETS from page 1
to save some of these through a number of mechanisms, including habitat protection as well as ex situ conservation. An important part of ex situ conservation involves maintaining orchid plants in cultivation. This process can remove collecting pressure on wild populations and preserve the existence of species that otherwise would go extinct. Established in December, 1996, the Orchid Seedbank Project (OSP) facilitates ex situ conservation by serving as a clearinghouse to distribute orchid seed from people who have it to those who are willing to sow the seed and raise orchid plants. Besides distributing seed, the OSP works with recognized orchid experts as well as conservation organizations to make sure that especially rare seed is directed to people who are experienced in orchid propagation. The web site offers seeds for sale at a

very reasonable price, as well as supplies that are necessary for sowing the seed and raising orchid seedlings. For anyone interested in raising orchids from seed, the site contains a wealth of information on the techniques and materials necessary to be successful. The project director, Aaron Hicks, has written a handbook on asymbiotic techniques for orchid germination, and this is available through the web site as well. If you're interested in supporting orchid conservation by exchanging seed with other orchid growers, or if you've always wanted to try your hand at raising orchids from seed, be sure to visit the OSP web site.

CONTINENTAL AGENCY

- ❖ Licensed Customhouse Broker
- ❖ Door to Door Service
- ❖ Just 5 minutes from LAX

We provide prompt, reliable and experienced Import personnel to assist you in bringing in orchids from anywhere in the world.

Located in the SAME BUILDING COMPLEX as the U.S. Department of Agriculture, we can closely track your shipment through CITES and Phytosanitary inspection process.

Speed up transit time for perishable orchids, cut down on your costs. And make it easier for YOU.

Ask for Ted or Monica. We have many happy San Diego customers. Ask us for references!

January/February Orchid Checklist

Prepared by Ned Nash and James Rose.

Cattleya Watering and fertilizing will be at a minimum, as will potting. Be on the lookout for senescing sheaths on your winter-into-spring bloomers. Careful removal of the dying sheaths will still allow buds to develop without the danger of condensation-induced rot. Low light will lead to weak spikes, so, and as noted above, staking is critical. If you have a chance to get out to nurseries, there may still be a chance to acquire good plants in sheath for spring bloom. Getting them now not only ensures that you'll have them, but allows them to acclimate to your conditions and bloom at their best.

Cymbidium We are well into the flowering season now. Outdoor growers should be cautious of freezing temperatures. Damage starts to occur below 30 F. Be diligent about tying the inflorescences for best arrangement of the flowers. Also watch closely for slugs and snails. If weather is quite wet, protect the plants from the rain and this will help to reduce the risk of botrytis spotting.

Lycaste The most glorious of all orchids, Lycaste, will be moving toward their flowering season. Make sure the palm-like leaves do not interfere with the emerging inflorescences. Tying them loosely together often is helpful. Some growers cut the leaves off at the pseudobulb, but this removes part of the attractiveness of this elegant orchid. Resist picking up the plant to inspect those beautiful buds and then setting it down in all different directions as the flower buds will be forced to re-orient themselves to the light source each time and will not open as nicely as they should. Keep plants a little drier during the shorter days.

Odontoglossums Odontoglossums and their intergeneric hybrids offer a great splash of color now. Though once thought of as being difficult to grow and requiring cool temperatures due to the emphasis on odontoglossum breeding, the new intergeneric hybrids made using Oncidium and Brassia, for example, are just the opposite. These plants are quite content in more intermediate conditions. New growths generally emerge in the spring, later forming beautiful plump pseudobulbs. Look for the flower spikes to emerge from the inner sheath of the pseudobulb. If your plant's pseudobulbs are shriveled, then the plants have been kept too dry or too wet. Inspect the roots to determine which condition prevailed. If the lead pseudobulb is large, plump and green (and back bulbs are shriveled) but no flower spike is evident, the plants may have been kept too dry.

Paphiopedilum The standard Paphiopedilum insigne-derived hybrids, which are called "bull dogs" and "toads," are at their peak. Unlike most other orchids, they can even be potted while in bud. There really is no wrong time to

pot a paphiopedilum, and no other orchid responds so favorably to fresh mix and a cleanup. Keep an eye on watering until roots begin to grow.

Phalaenopsis Now is the peak of spike development, with the first plants in full flower. Staking and plant preparation is a must for those all-important spring shows. Correct staking now will give a better display and also make it much easier to transport to your society meetings and shows. Care with watering is vital to avoid mechanical damage to the flowers, as well as rot-related problems. Keep spent blooms cleaned up to avoid botrytis inoculation. Do not repot this month. Now you'll be seeing lots of phalaenopsis at orchid shows and sales.

Zygopetalum For the most part, the flowering season will have ended for this group, providing the grower a chance to do some repotting. The plants will then have a chance to become well established before the hotter months of summer arrive. Most growers use bark mixes, but some exceptional results have been seen lately using rock-wool blends. You may want to try this mix, but do not change your whole collection over to this new media until you are sure it is right for you. First, experiment with a few plants to see how they respond.

HELP WITH THE NEWSLETTER

by Marjorie Kuhlmann

I've had help from Helen Odom and Ethel Warner over the past few years in readying the newsletters for mailing. Time and circumstances have made it where they can no longer help, and I want to thank them for being there and for their service to SDCOS.

I need a couple of people that I can count on to help out on a once a month basis, usually a Friday or Monday, one week before the meeting. Every once in a while it may be a little earlier as we anticipate heavy mail during that mailing time (ie: Elections, Holiday mail, etc.).

I live in Rancho Bernardo and take the mailings to the Carmel Mountain Postoffice, so prefer to do the mailing as my home as it's too much to lug all the materials around. (If we are here during lunch time, I'll even provide lunch!)

If you are available please call me at: 858.675.0885 or email me at: m_kuhlmann@sbcglobal.net

**Orchid growers, summer is here and it is time to re-pot your plants!
Want to upgrade the quality of your potting mix?**

There is a solution, Maidenwell Diatomite. Mined from fresh water diatom deposits in Australia, heated to 1400 degrees, and uniformly graded in two sizes. Maidenwell Diatomite is ideally sized, medium for mature plants and fine for seedlings.

Fantastic results have been had by mixing; 2 parts diatomite, 1 part perlite, and 1 part bark or coconut chunks. This potting media is very easy to work with. It flows easily into the pot and settles firmly around the roots requiring little or no compaction. Roots grow vigorously into the media. Watering frequency and fertility is the same as with bark.

\$22.00 per bag in two sizes medium and small

Are you using De-ionized or Reverse Osmosis water for your plants?

Try my custom fertilizer blend designed for pure water; your plants will love it.
